

DISCUSSION QUESTIONS DWA_9

What problems did you encounter converting the book preview to a component?

Using web components to convert the book preview to a component was challenging. Creating a template did not display the books even though I added the css styles and the html.

What other elements make sense to convert into web components?

Why?

Other elements can be the header search bar because it have its own functionality and can be encapsulated to make it easier to maintain, understand and is more organised.

Why does keeping your HTML, CSS and JavaScript in a single file sometimes make sense?

It can be good when you are working on small projects because it's easy to maintain and makes work fast. It's good for sharing code too.
